LAB-2 SE

NAME- RACHITH M

SRN – PES2UG24CS392

SECTION -G

Reflection Questions:

1. Did your estimations reflect the actual effort?

Yes, the estimated story points were reasonably accurate because all planned stories were completed within the sprint. The story points were successfully delivered, showing that the estimations were close to the actual effort required.

2. Was your backlog well-prioritized?

Yes, the backlog was prioritized by implementing the important functional requirements first and distributing the stories across the planned sprints. This helped the team focus on completing the most important work.

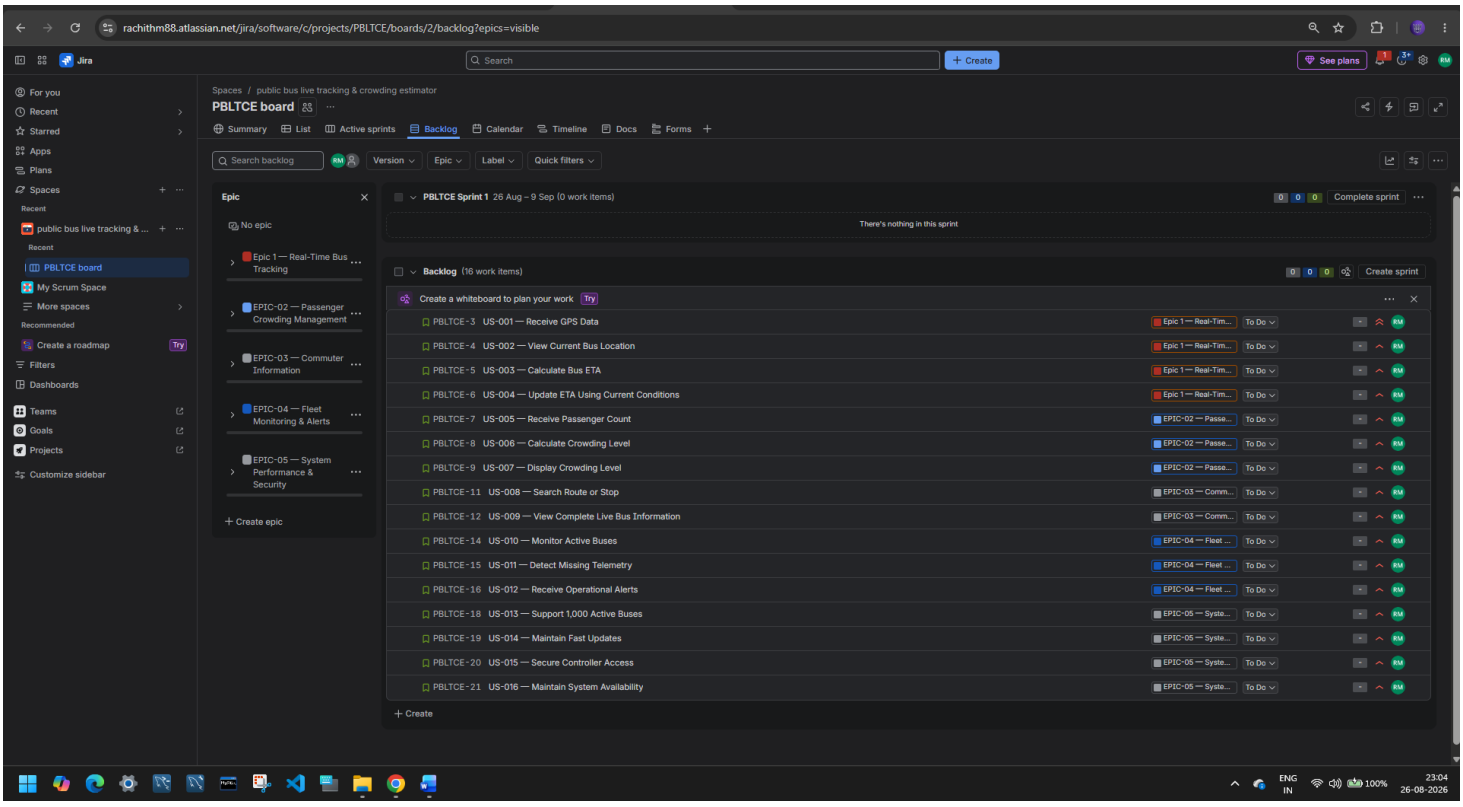

3. How did your simulated sprint align with your plan?

The simulated sprint aligned well with the plan. The stories were assigned to the planned sprints, worked on through the workflow, and eventually moved to Done. The planned sprint work was completed successfully.

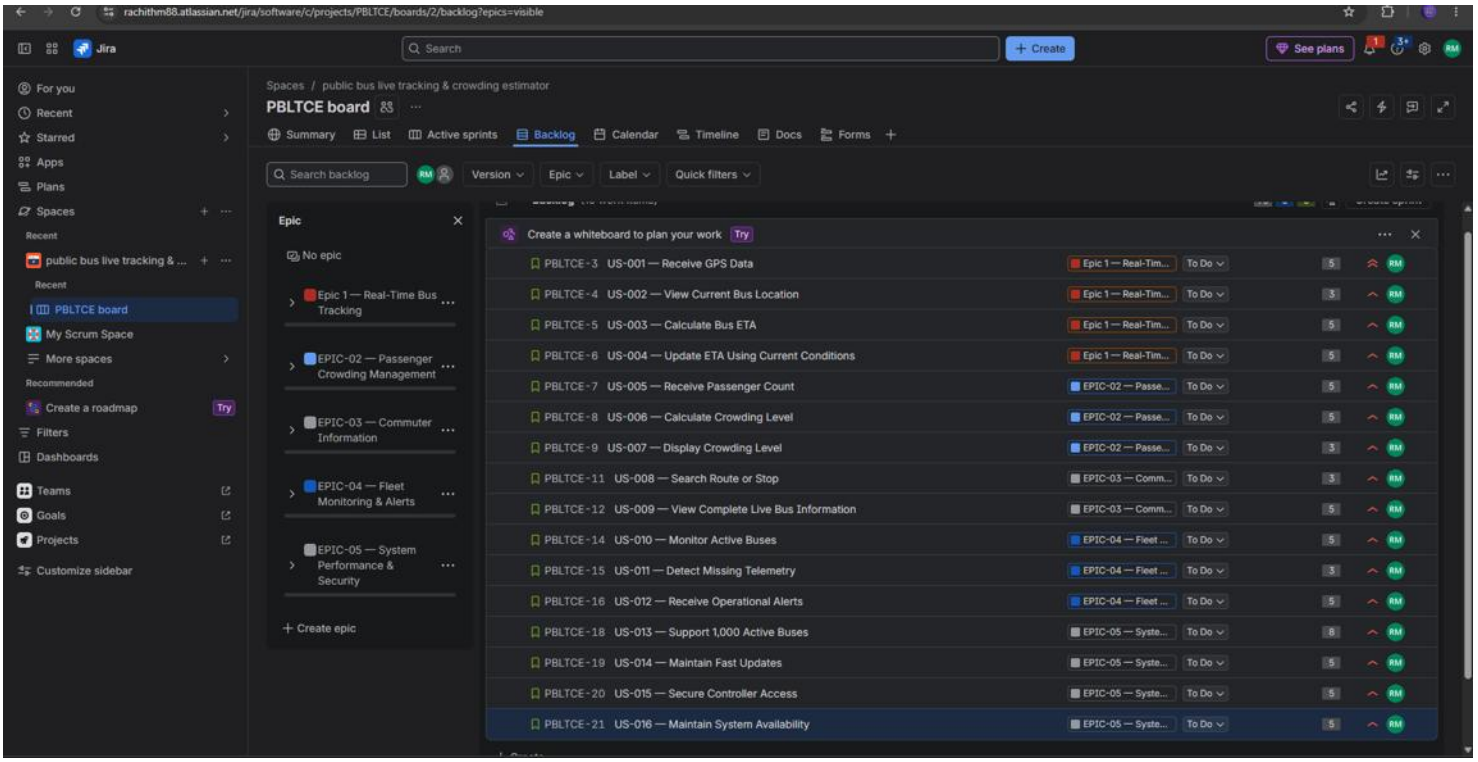

4. What insights did the burndown chart give about your team's capacity?

The burndown chart showed that the team was able to complete the planned workload within the sprint. Since the remaining work reached 0 story points, it indicates that the team had sufficient capacity to handle the planned 16 story points. It also helped visualize the progress and confirm that the sprint goal was achieved.

Jira backlog with Epics and User Stories.

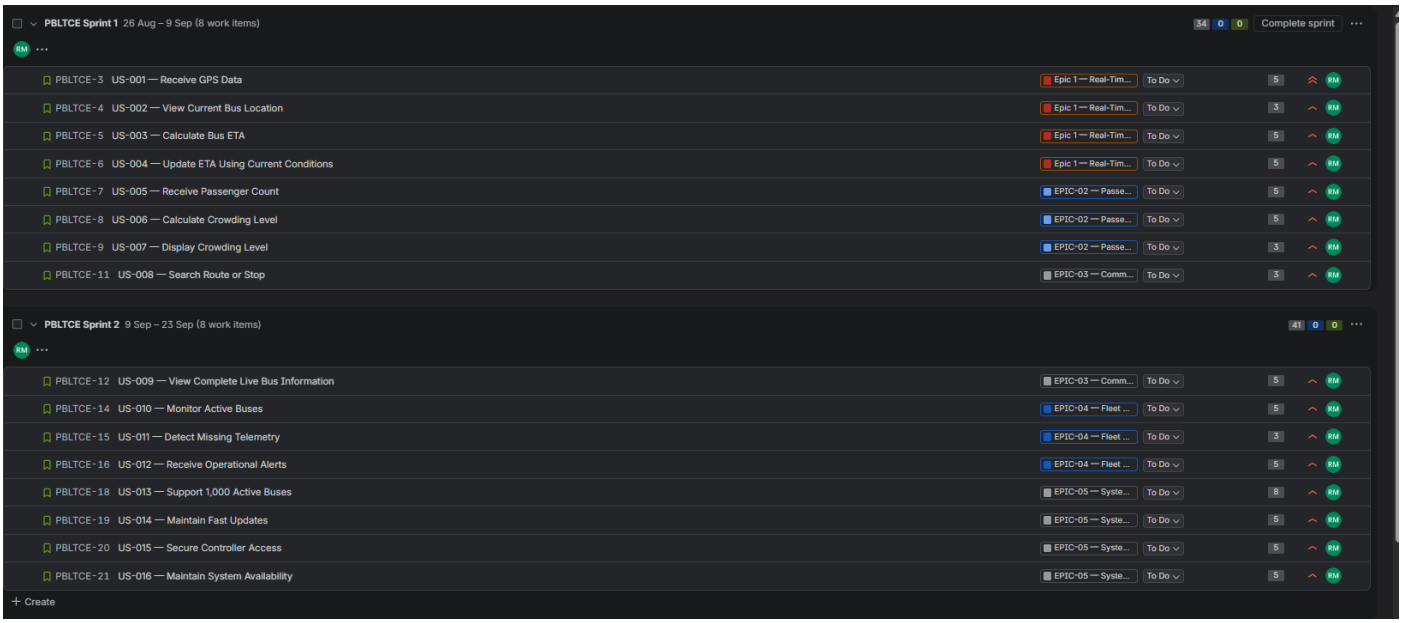

Story point assignments.

Sprint board (Active Sprint view).

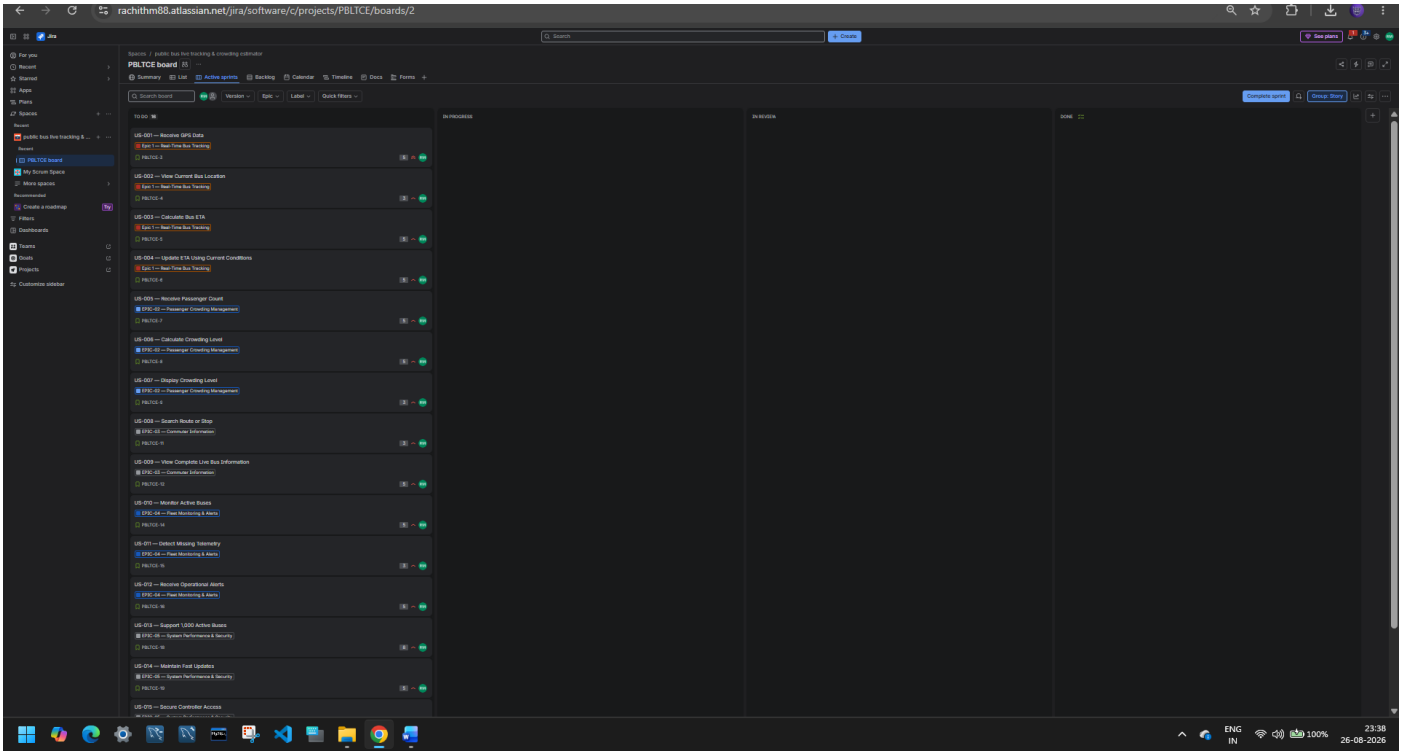

-Creation of a sprint1 and sprint2

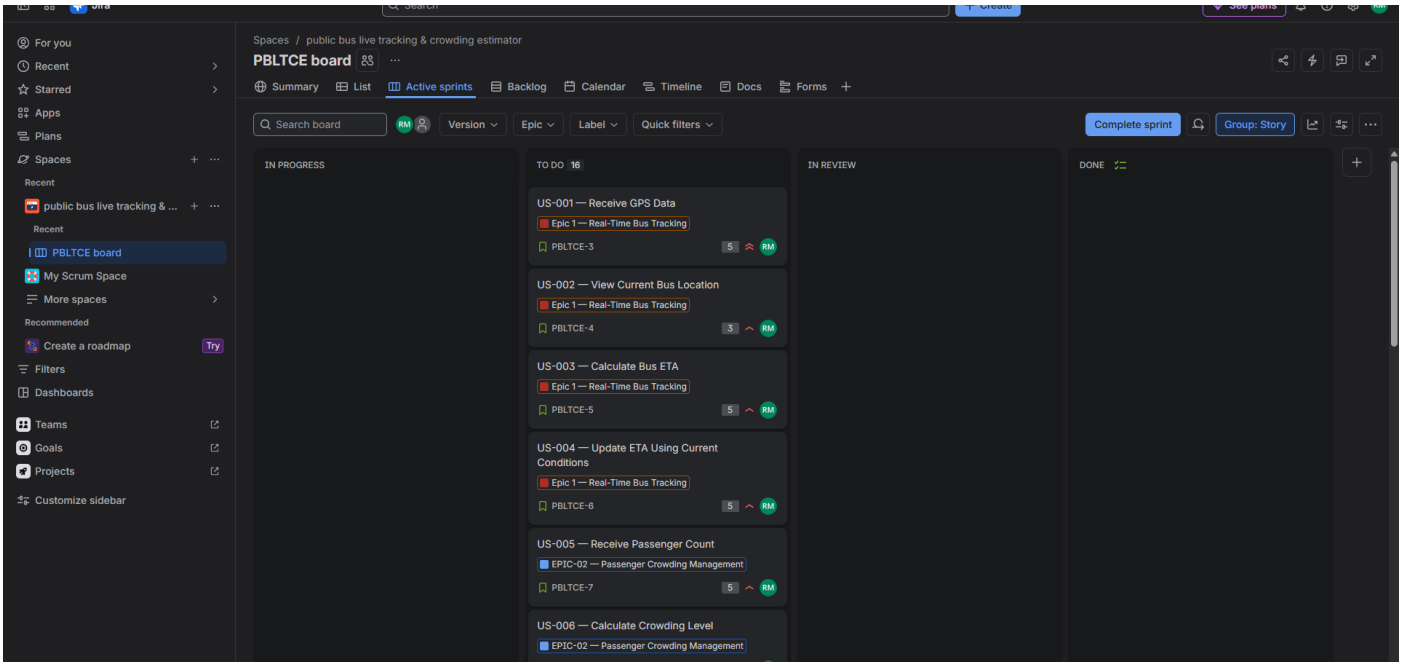

Each sprints have 8 user stories.

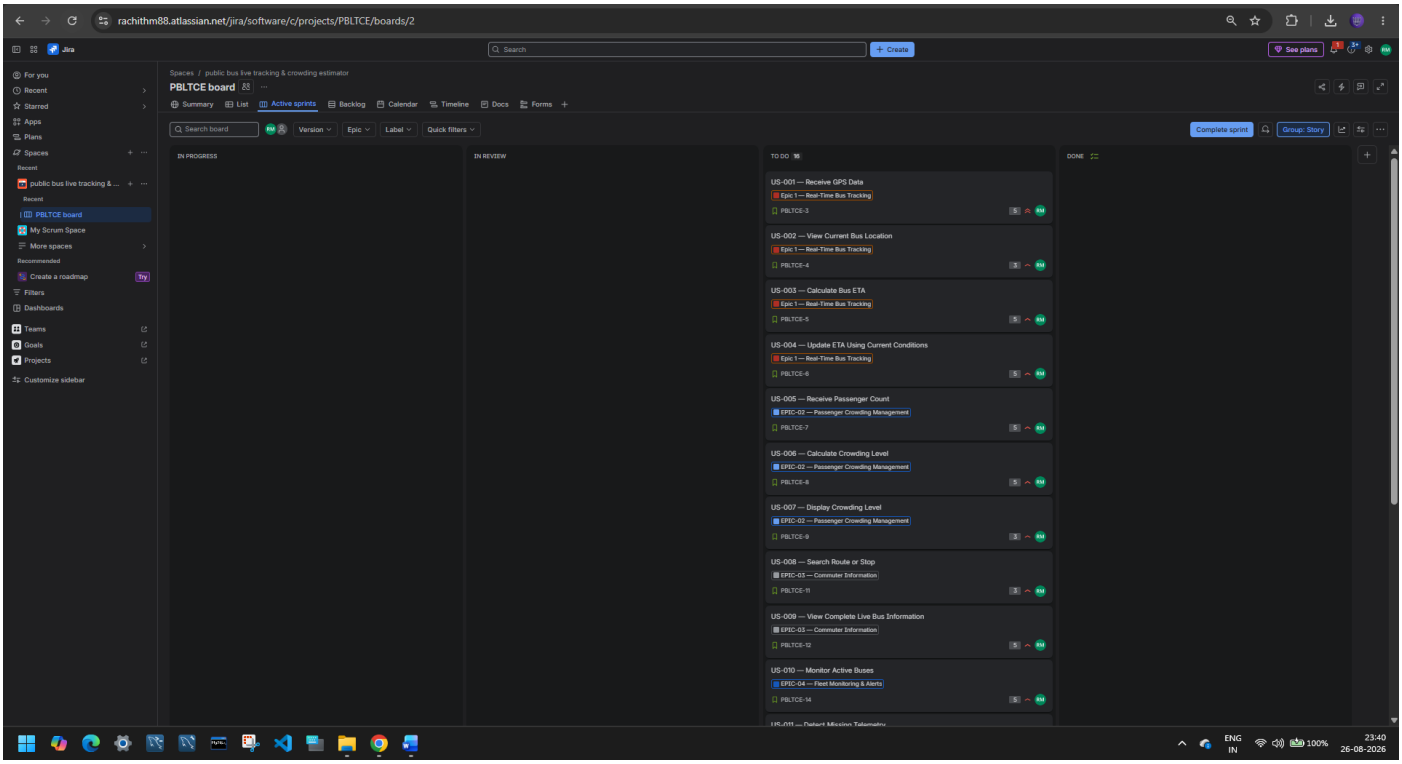

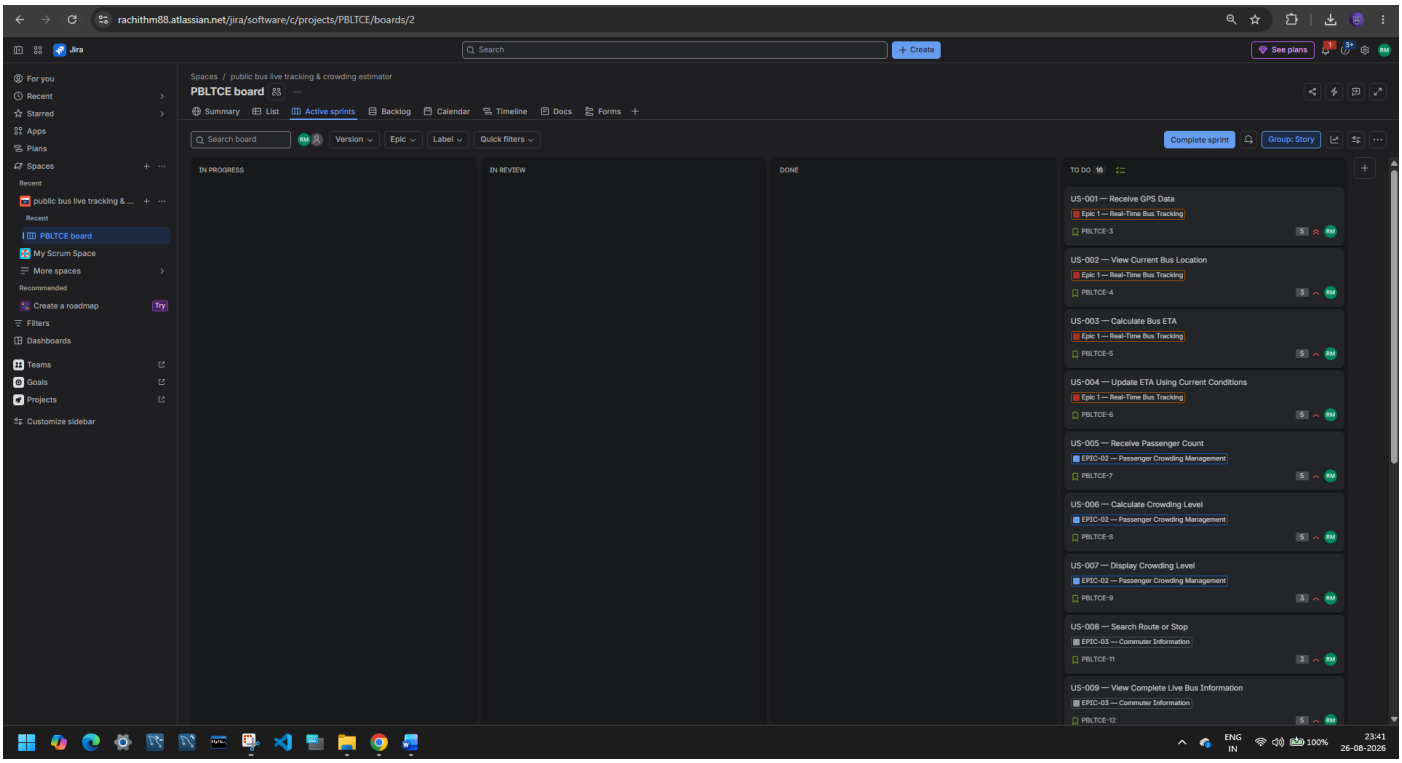

Active Sprint Board

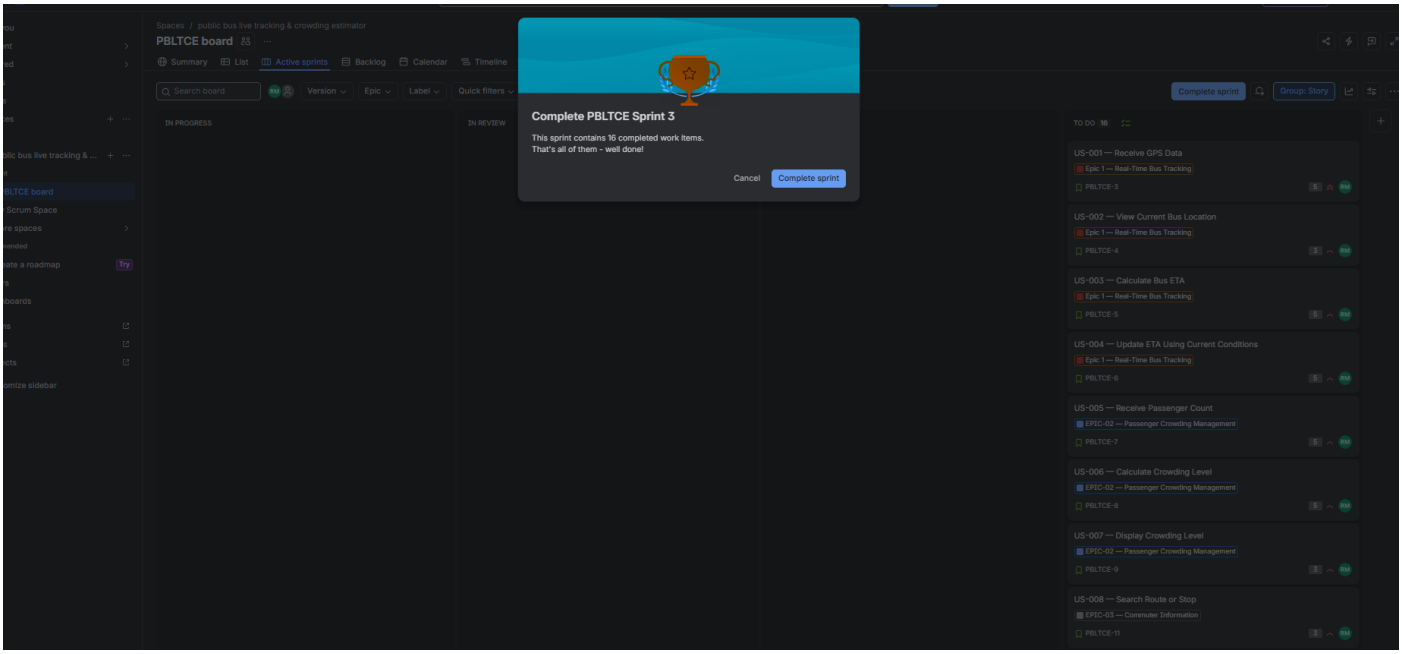

-Stimulation of sprints
